PROJECTS

Labs on Docker.

Team Size: 4

Client server architecture for containers. Docker containers are present at server side. Shipping/giving access to Docker container containing an application to the client machine as the request is received through a website. Useful in colleges as no need to install or have applications on each and every machine.

Gym Website.

Team Size:2

Implemented Gym Website using Asp.net framework. The site made use of Html/CSS on the front end and used MySQL as backend. A website provides information that is necessary while choosing a gym and also user can join the gym.

Encryption-Decryption Shell Script.

Team Size:2

A shell script which runs like a command that encrypts and decrypt the files and symbolic link. It is easy for the user to use this as help page is also provided for each option and for command.
